

## Project Design Phase-II

# Data Flow Diagram & User Stories

|               |                                                                                          |
|---------------|------------------------------------------------------------------------------------------|
| Date          | 20 July 2026                                                                             |
| Team ID       | FinWise AI Team (SmartBridge SIP 2026 - SRM AP)                                          |
| Project Name  | FinWise AI - Intelligent Loan Eligibility, Credit Analysis & Financial Advisory Platform |
| Maximum Marks | 4 Marks                                                                                  |

## Data Flow Description (Level-0 / Level-1)

**Level-0: User <-> FinWise AI Web App <-> {Groq AI API, Google Apps Script + Google Sheets}**

| Step | Data Flow                                                                                                                                                |
|------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1    | User opens index.html and navigates to a module (Eligibility / Credit Score / EMI / AI Tips).                                                            |
| 2    | User enters financial details (salary, age, credit score, existing EMI, loan amount, tenure, interest rate) into the form.                               |
| 3    | Client-side JavaScript validates the inputs and runs the relevant rule engine (eligibility.js / credit-score.js / emi.js).                               |
| 4    | For AI Tips, the validated inputs are sent as a prompt to the Groq AI Chat Completions API; the model returns personalised financial guidance.           |
| 5    | Results (eligibility status, eligible amount, credit classification, EMI figures, or AI tips) are rendered on the page instantly, without a page reload. |
| 6    | In parallel, the result payload is POSTed to a Google Apps Script Web App endpoint.                                                                      |
| 7    | The Apps Script (doPost) appends the submission as a new row in a connected Google Sheet for record-keeping / analytics.                                 |

## User Stories

| User Type      | Functional Requirement (Epic) | User Story No. | User Story / Task                                                                                  | Acceptance Criteria                                                            | Priority | Release   |
|----------------|-------------------------------|----------------|----------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------|----------|-----------|
| Loan Applicant | Loan Eligibility              | USN-1          | As a user, I can enter my salary, age, credit score and existing EMI to check my loan eligibility. | System shows Eligible/Not Eligible and the eligible loan amount                | High     | Sprint -1 |
| Loan Applicant | Credit Score                  | USN-2          | As a user, I can view my credit profile classified as Excellent, Good, or Poor.                    | Classification and short explanation shown instantly                           | High     | Sprint -1 |
| Loan Applicant | EMI Calculator                | USN-3          | As a user, I can calculate my monthly EMI by entering loan amount, tenure and interest rate.       | EMI, total interest and total payment displayed using reducing-balance formula | High     | Sprint -1 |
| Loan Applicant | AI Financial Tips             | USN-4          | As a user, I can get AI-generated personalised                                                     | Tips are displayed within a few seconds                                        | Medium   | Sprint -2 |

| User Type      | Functional Requirement (Epic) | User Story No. | User Story / Task                                                                | Acceptance Criteria                                              | Priority | Release   |
|----------------|-------------------------------|----------------|----------------------------------------------------------------------------------|------------------------------------------------------------------|----------|-----------|
|                |                               |                | financial tips based on my inputs.                                               | via the Groq API                                                 |          |           |
| Admin / Team   | Data Logging                  | USN-5          | As a team member, I want every submission logged to Google Sheets automatically. | A new row appears in the connected sheet after each submission   | Medium   | Sprint -2 |
| Loan Applicant | Responsive UI                 | USN-6          | As a user, I can use FinWise AI comfortably on mobile, tablet or desktop.        | Layout adapts cleanly across breakpoints with no broken elements | Low      | Sprint -2 |
