

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	20 July 2026
Team ID	FinWise AI Team (SmartBridge SIP 2026 - SRM AP)
Project Name	FinWise AI - Intelligent Loan Eligibility, Credit Analysis & Financial Advisory Platform
Maximum Marks	4 Marks

Functional Requirements

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Data Entry	Enter name, monthly salary, age, credit score, existing EMI Client-side input validation
FR-2	Loan Eligibility Check	Apply rule-based eligibility criteria Calculate eligible loan amount (Salary x 20) Display eligible / not-eligible result with reasons
FR-3	Credit Score Analysis	Classify score into Excellent / Good / Poor Show improvement suggestions for low scores
FR-4	EMI Calculator	Accept loan amount, tenure and interest rate Compute EMI using the reducing-balance formula Display amortisation summary
FR-5	AI Financial Tips	Send user's financial inputs to Groq AI API Display personalised, plain-language financial guidance
FR-6	Data Logging	POST submitted results to a Google Apps Script Web App Append each submission as a row in Google Sheets
FR-7	Responsive Web UI	Glassmorphism-themed layout Works on desktop, tablet and mobile breakpoints

Non-functional Requirements

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	Single-page, no-signup forms with clear labels; results shown instantly without page reload.
NFR-2	Security	No sensitive financial data stored server-side; API calls made over HTTPS; API key kept client-configurable rather than hard-coded in a shared backend.
NFR-3	Reliability	Rule-based eligibility, credit classification and EMI logic are deterministic and give consistent results for the same inputs.
NFR-4	Performance	Static pages load in under 2 seconds; EMI/eligibility calculations are instantaneous; AI tip generation typically completes within a few seconds via Groq's low-latency inference.
NFR-5	Availability	Hosted on GitHub Pages, providing 24x7 static-site availability with no server maintenance.

NFR No.	Non-Functional Requirement	Description
NFR-6	Scalability	Stateless front-end architecture can be extended with authentication, a real database, or additional financial modules without redesigning the core.
