

Project Design Phase

Proposed Solution Template

Date		20 July 2026
Team ID		FinWise AI Team (SmartBridge SIP 2026 - SRM AP)
Project Name		FinWise AI - Intelligent Loan Eligibility, Credit Analysis & Financial Advisory Platform
Maximum Marks		2 Marks
S.No	Parameter	Description
1.	Problem Statement (Problem to be solved)	Individuals and first-time borrowers have no free, instant way to check loan eligibility, understand their credit standing, or calculate EMIs before approaching a bank - leading to wasted time, confusion and avoidable loan rejections.
2.	Idea / Solution description	FinWise AI is a single-page web platform that offers a rule-based Loan Eligibility Checker, a Credit Score Analyzer, a reducing-balance EMI Calculator, and Groq AI-powered personalised financial tips - all in one glassmorphism-styled dashboard, with every submission logged to Google Sheets.
3.	Novelty / Uniqueness	Combines deterministic financial rule engines (eligibility, credit classification, EMI) with generative-AI advice in one lightweight, no-login, fully static web app - most existing tools offer only one of these in isolation, and usually require an account.
4.	Social Impact / Customer Satisfaction	Helps under-banked and first-time users self-assess their financial position before applying, reducing anxiety and unnecessary rejections; free, ad-free and accessible from any device with no signup barrier.
5.	Business Model (Revenue Model)	Freemium model - core checks remain free; potential revenue via referral commissions from partner NBFCs/banks for pre-qualified leads, a premium detailed credit-improvement report, or white-labelling the platform for lending institutions.
6.	Scalability of the Solution	The stateless static front-end can be extended with user authentication, a real database, additional financial products (insurance, investment planning), multilingual support, and a dedicated backend/API layer as usage grows.
